About Didelta Automation

Didelta Automation has become a prominent force within the vending industry in Sub Saharan Africa. Didelta Automation provides a full range of vending services, including supply, installation, servicing and technical support.

Our flexible service model and strong alliance relationships allow us to create solutions, which are tailored to the specific needs of an organisation or business. We streamline your inventory management and reduce costs through automation. Our cutting edge vending solutions are backed by advanced technologies, allowing you to run usage analytics and ensure inventory accountability at every site.

What make our industrial vending machines different?

- Purpose built for industrial and office environment
- Powerful inventory management software
- No cash transactions. Employees login with their existing employee badge
- User interface designed for making complex inventory transactions easy.
- Flexibility to dispense a wide variety of item types and thousand of SKUs
- Doesn't require repackaging
- Items can be returned back into dispensing machines
- Provides usage analytics
- Ability to assign unique access rights to employees
- Log management reports in real time
- Ability to rent and return items
- Limitless configuration depending on your inventory

SavePro

The save Pro is a coil operated vending machine that has the ability to distribute up to 2100 items, it is mainly used for distribution of personal protective equipment (PPE) and office stationery. Its flexibility allows for other functionality such as distributing IT consumables and peripherals within workplaces. The Save Pro has won multiple awards in this space for its seamless ability to supply employees with necessary equipment within seconds.

Benefits

- Up to 50% cost reduction
- 100% control over consumption
- Restriction and recording of employee access to items
- Available 24/7

SaveRing

The Save Ring is a carousel type vending machine with the most versatile functionality and capabilities compared to other products currently available on the market today. With the ability to store and distribute up to 540 unique items, far greater flexibility in the layout design of the machine with up to 15 rows. The Save Ring combines 3 basic operations: allocate single-use items, returnable items (rent-track, reserve and return) reusable items.

Benefits

- **Controls and tracks all transactions (distribution, rent and return)**
- **Generates standard and custom reports for management and administration**
- **Provides the ability to set restrictions on individual user access rights**
- **Available 24/7**

SaveBox

The Save Box is a smart locker vending machine which stores and distributes maintenance, repairs and operations (MRO) tools and equipment. With a wide variety of options regarding compartment sizes, it offers the user the ability to store items of different shapes and sizes. The Save Box has unique configuration options such as the built in scale unit which allows for a more accurate management procedure of small items. It also has the option of fitted garment holders to manage and distribute wearable items.

Benefits

- **100% accountability and cost tracking: personal access rights can be set and all transactions are logged to the individuals**
- **You select the set up you need: connect more Save boxes together in any combination. So you can even put together an entire wall**
- **Up to 40% cost saving on PPE or MRO items**
- **Available 24/7**

SaveFlex

The Save Flex is a locker type vending machine built for the purpose of distributing high value items such as laptops, tablets, smartphones, projectors etc in the workplace. Employee on boarding is made easy through the Save Flex, as well as IT service and maintenance. You have the ability to grant access rights to specific users on a specific slot of the locker. Not only is it limited to these functions but The Save Flex is also a great solution for exchanging and repairing tools, within a factory.

Benefits
- **It is the most effective and trendy tool to hand out welcome packages for new employees.**
- **Full integration in supporting ticketing system**
- **Available 24/7**

SaveReturn

The Save Bin is an industrial waste collection machine which enables you to collect, recycle and dispose fo used items in a controlled manner by logging and recording all returns by employees. It is a peripheral for the Save Pro and the Save Box Smart, enabling you to connect the uptake of new items to the recycling of used items, or to control the number of items in each transaction. Naturally the return process can function on its own, without acquiring a new item or any other prerequisite steps.

Configuration Options

- **Positions can be freely named, and will be displayed on the interface accordingly.**
- **Maximum levels can be filled for each position with the system automatically alerting the user if said levels are reached**
- **One product can be configured into multiple positions**
- **You can collect more than one product per person.**

SaveLog System

SaveLog Management Software is a common platform for operating all IVM products (industrial vending and renting machines). It provides the option to manage employees, access, regulations, configurations, vending machines, user, suppliers and to create detailed reports.

No special IT knowledge is required to use SaveLog, user-level general software knowledge is sufficient, however, the user has to have a clear idea of the services and functions offered by the industrial vending machines as well as their basic physical layout. Training is always offered by us.

The SaveLog Management Software is a web application. It does not require any further installation to the user's system. The interface can be reached through any standard browser if the user has access to the network on which it is installed.

SaveLog is installed onto the client's network, a separate dedicated network or to the PC of one of the vending machines. It can be reached from within a network or by connecting to the network remotely with VPN clients or a unique URL.

SaveLog connects to the company's (or alternatively to our own) SMTP server to send email messages, including alerts and notifications.

The SaveLog software regularly communicates with the vending machines, sends and receives data in order to govern access rights, follow limit usage and monitor the transactions.

Improving workflow efficiency:

- Easy access of consumables

- 24/7 availability

- Efficient distribution of consumables (takes 10 seconds to get an item)

- Digitisation of supply chain (reducing paper work)

- Waste reduction

- Customised solutions

- Well-structured, user friendly software

Lowering costs:

- Removal of the need for extra quantity stock as backup

- Lower consumption due to more control (our clients feedback has reported up to 30% savings in their consumables)

Control over-consumption:

- Accurate Consumption Data – employees get their items using their company access cards, hence every transaction (who, what, when, where, how many) is logged and a detailed consumption report is sent you

- Decisions concerning use/access rights - who can get which product, when, how often as well as how many

- Limitations can be set for individual as well as groups of employees

- Decisions of what should be placed in the machine
